

Table 3A – Colorado Special District Population and Housing Estimates for July 1, 2005.

Column A. – Total Population for July 1, 2004

Column B. – Total Population Estimates for July 1, 2005. This number is the sum of the allocated municipal and/or unincorporated components of the Special District. It is calculated by taking the ratio of the municipal and/or unincorporated components of the special district to the total municipal and/or unincorporated population for 2004 and multiplying that by the total municipal and/or unincorporated population in 2005 plus any adjustments for annexations.

Example: 2004	District XYZ =	300	
	Muni ABC portion =	250	Total Muni ABC = 500
	Unincorporated portion =	50	Total unincorporated = 400
<hr/>			
2005			Total Muni ABC = 600
			Total unincorporated = 425
	District XYZ		
	Muni ABC portion =	$(250/500)*600$	= 300
	Unincorporated portion =	$(50/400)*425$	= <u>53</u>
	Total District XYZ		= 353

Column C. – Group quarter population for 2004.

Column D. – Group quarter population for 2005. This number is calculated the same way as the total population but uses the group quarter population.

Column E. – Household population for 2005. This number takes the total population from column B and subtracts the group quarter population from column D.

Column F. – Total housing units in 2004.

Column G. – Total housing units in 2005. This number is calculated the same way as the total population but uses the housing unit data.

Column H. – Total occupied housing units in 2004.

Column I. – Total occupied housing units in 2005. This number is calculated the same way as the total population but uses the occupied housing units.

Column J. – Vacant housing units. This number takes the total housing units in column G and subtracts the occupied housing units in column I.
